#### **DNA Metabarcoding**

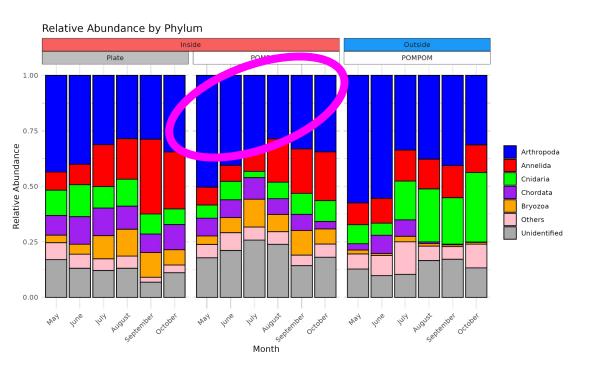

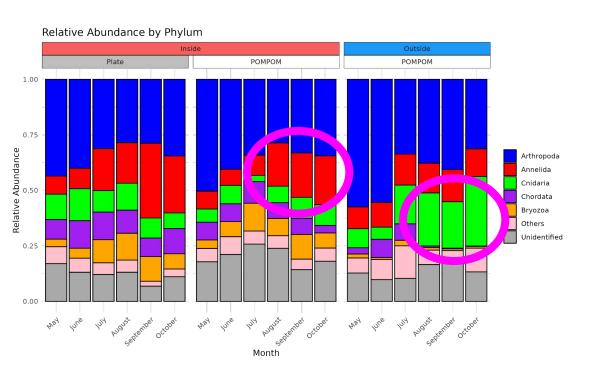

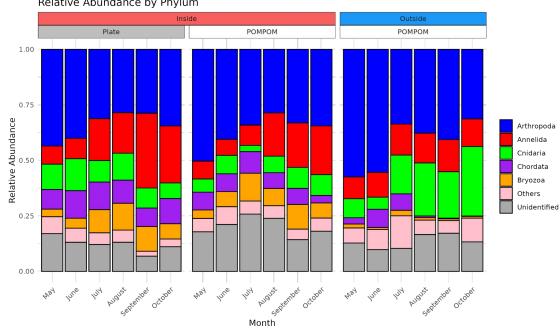

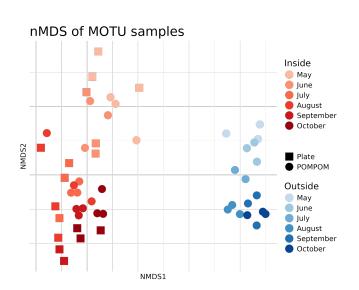

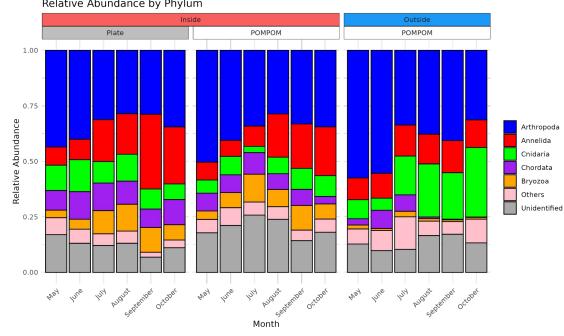

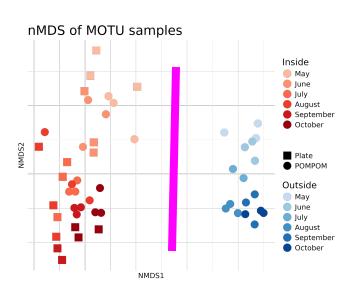

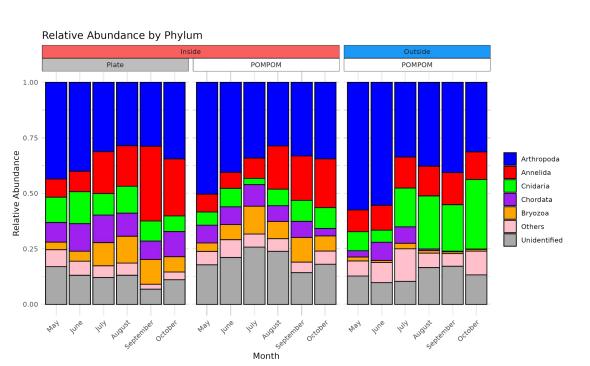

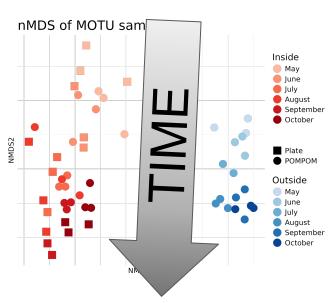

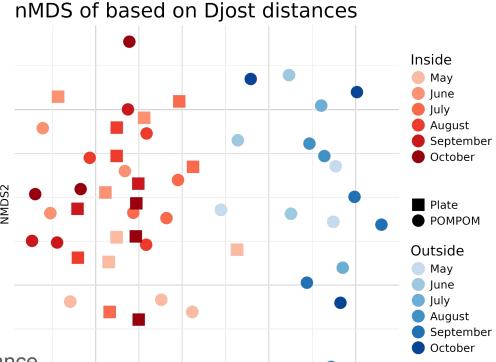

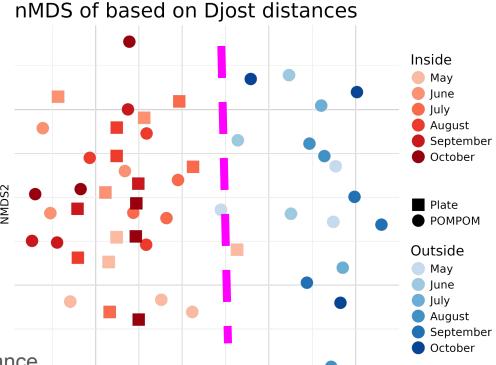

\* Merge of all the distance matrix based on haplotypes in one single matrix

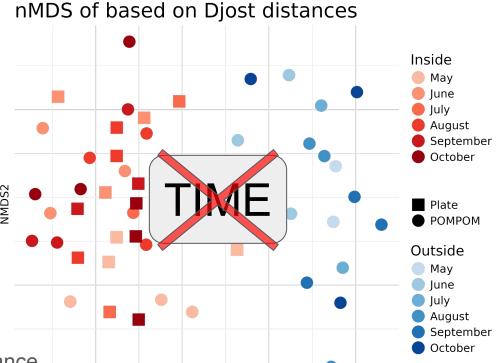

NMDS1

\* Merge of all the distance matrix based on haplotypes in one single matrix

NMDS1

\* Merge of all the distance matrix based on haplotypes in one single matrix

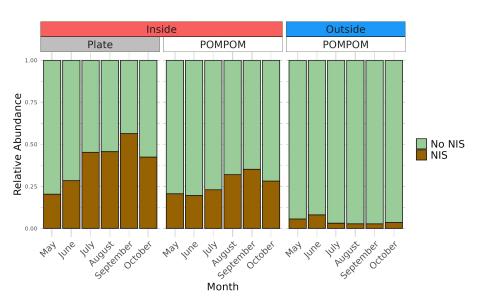

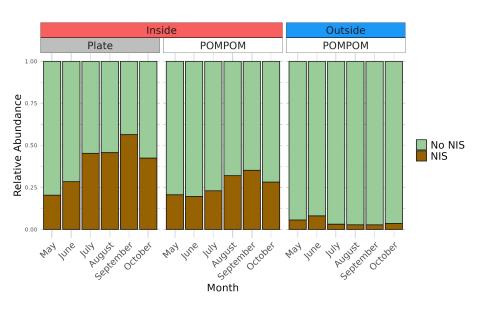

# 57 NIS (MOTUs) ~ 3.2%

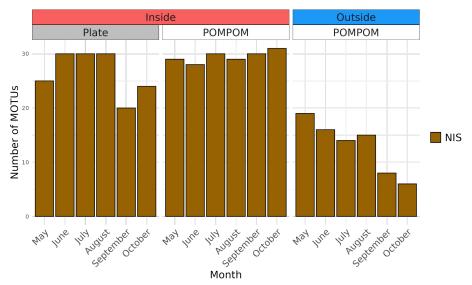

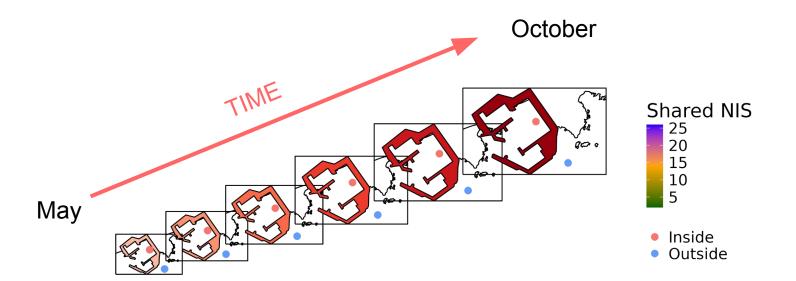

# 57 NIS (MOTUs) ~ 3.2%

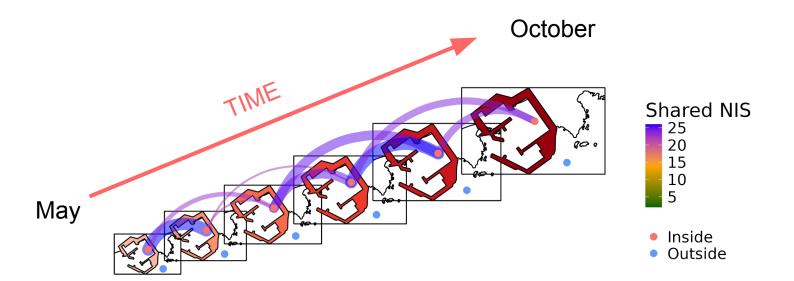

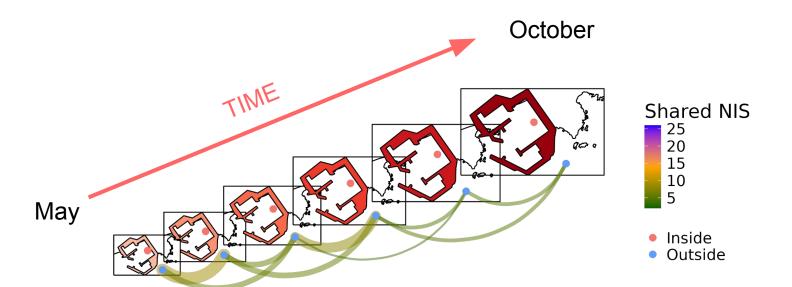

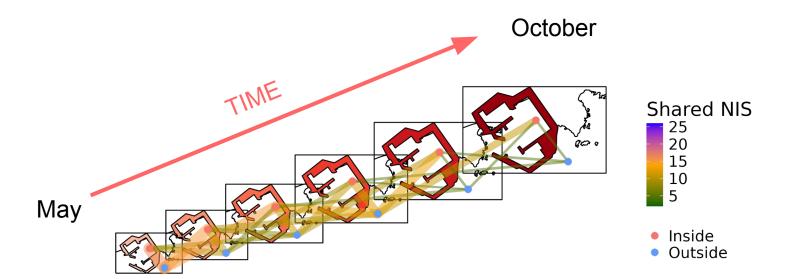

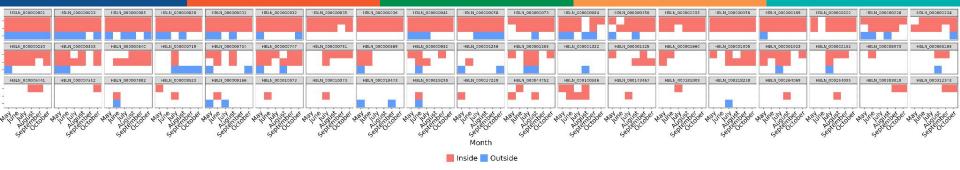

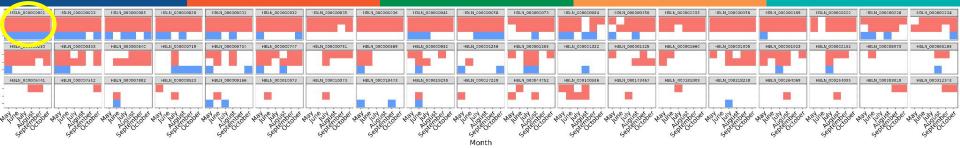

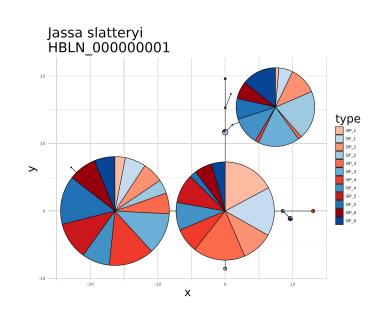

1. Non-Indigenous Species spread from harbours to the surroundings but not all of them remain established

- 1. Non-Indigenous Species spread from harbours to the surroundings but not all of them remain established
- Metabarcoding can produce a lot of data with a lot of information

- 1. Non-Indigenous Species spread from harbours to the surroundings but not all of them remain established
- Metabarcoding can produce a lot of data with a lot of information
- 3. R package with tools to process metabarcoding data at intra-MOTU level

- 1. Non-Indigenous Species spread from harbours to the surroundings but not all of them remain established
- Metabarcoding can produce a lot of data with a lot of information
- R package with tools to process metabarcoding data at intra-MOTU level
  - Species have different spatio-temporal dynamics, NIS are an example of this

- 1. Non-Indigenous Species spread from harbours to the surroundings but not all of them remain established
- Metabarcoding can produce <u>a lot of data</u> with a <u>lot of information</u>
- 3. R package with tools to process metabarcoding data at intra-MOTU level

4. Species have <u>different spatio-temporal dynamics</u>, NIS are an example of this

- Non-Inc surroun
- Metaba <u>informa</u>
- R packa intra-M(
- Species an exar
