The LifeWatch ERIC Biodiversity & Ecosystem
eScience Conference

Heraklion, 30 June - 3 July 2025

Session: Biodiversity Observatory: Smart Systems for a Living Planet Revolutionising Biodiversity Monitoring with Automation

2 July 2025 | 11:30-13:00

Integrating Earth Observations, eDNA and Computer Vision for automated assessment of soil health

Presenter: Spyros Theodoridis

Dimitris Bormpoudakis, Charalampos Kontoes
BEYOND Centre of Excellence, National Observatory of Athens

Soil biodiversity: a key component of ecosystem health

Soil Services

Above ground
biodiversity

Plant production

Aggregate soil
structure

Soil water
infiltration and
storage

Soil fertility

iucn.org

Microbial diversity drives multifunctionality in terrestrial ecosystems

Nature Communications 2016

Fungal-bacterial diversity and microbiome complexity predict ecosystem functioning

Nature Communications 2024

An ever increasing interest in soil biodiversity

BIOGEOGRAPHY

A global atlas of the dominant bacteria found in soil

Science 2018

Global analysis of soil bacterial genera and diversity in response to pH

Soil Biology and Biochemistry 2024

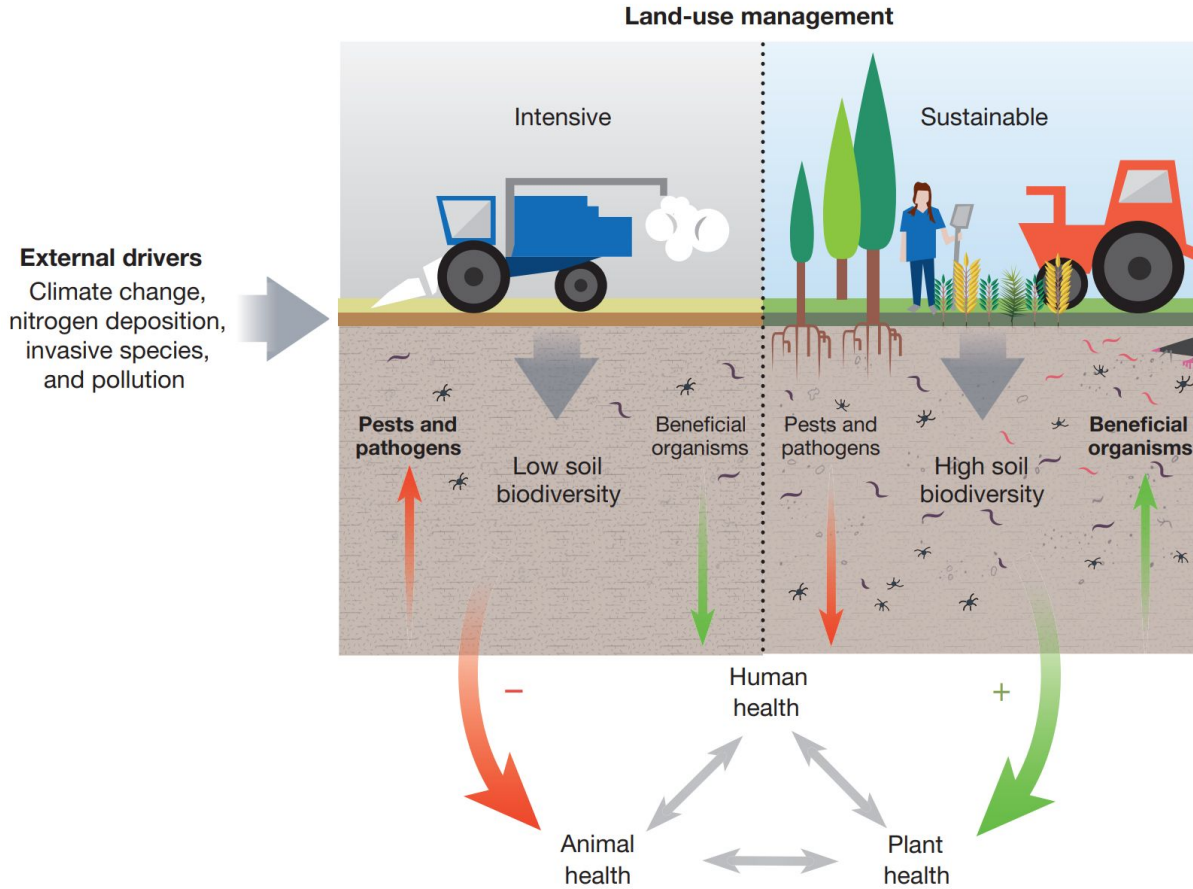

Soil health is associated with higher primary productivity across Europe

Nature Ecology & Evolution 2024

Patterns in soil microbial diversity across Europe

Nature Communications 2024

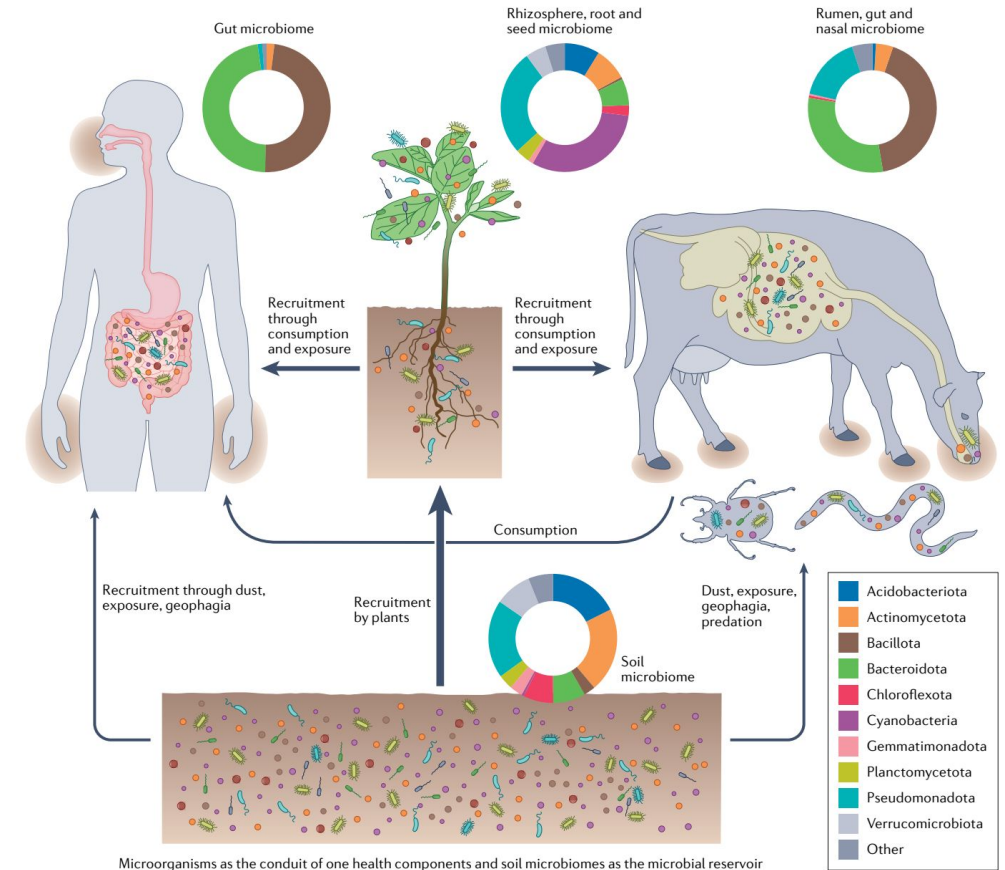

Soil biodiversity: a key component of human health

Soil biodiversity and human health

Diana H. Wall^{1*}, Uffe N. Nielsen^{2*} & Johan Six^{3*}

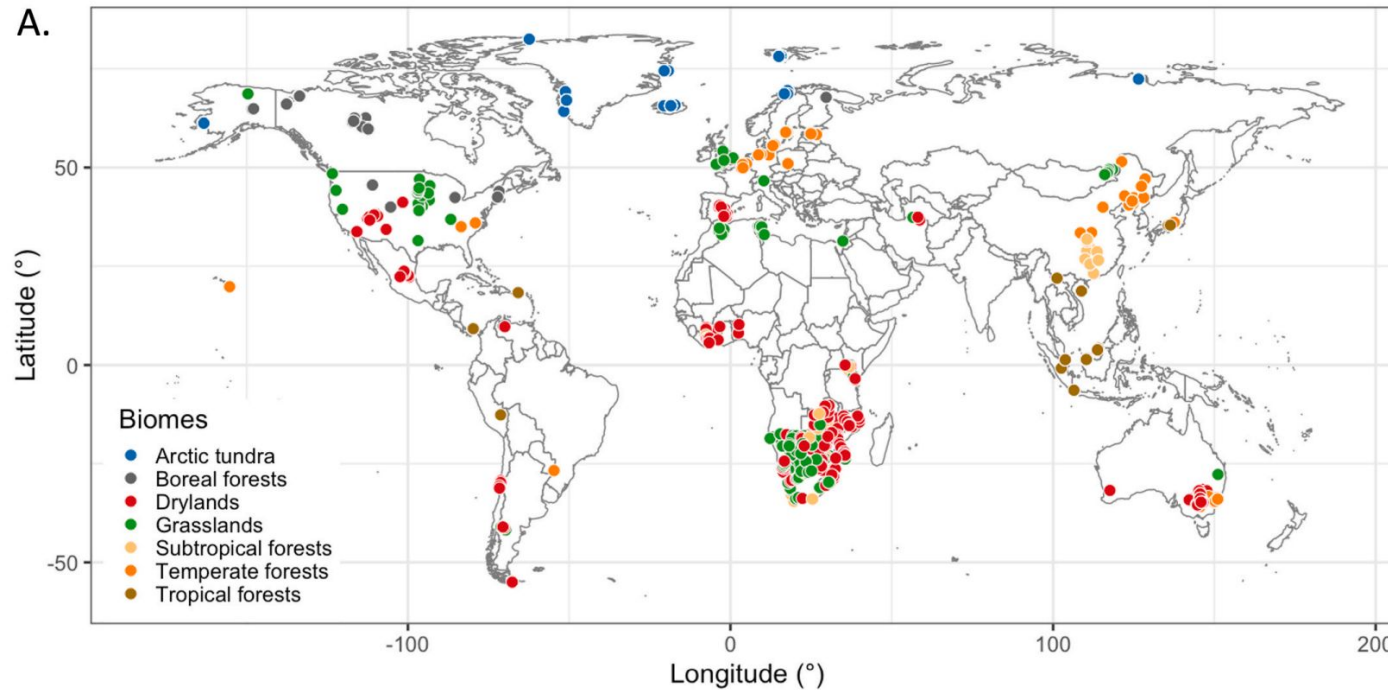

Nature 2015

Soil microbiomes and one health

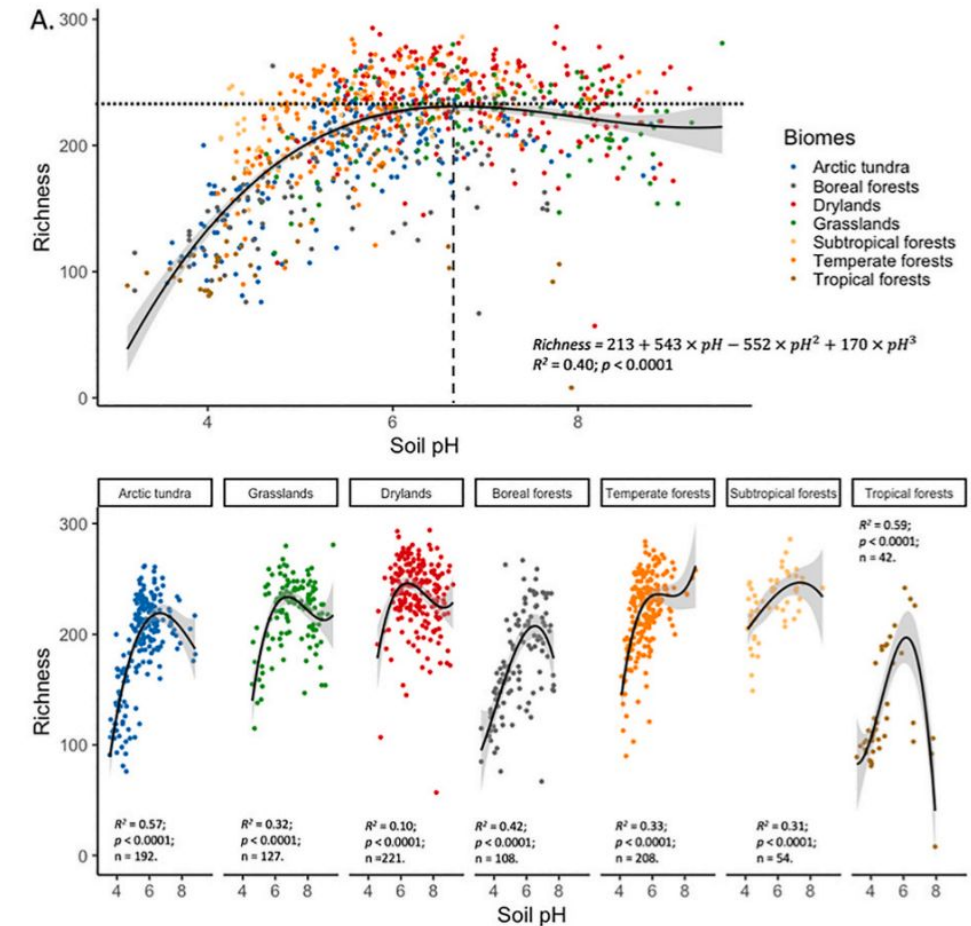

Nature Reviews Microbiology 2022

Soil biodiversity: predictions

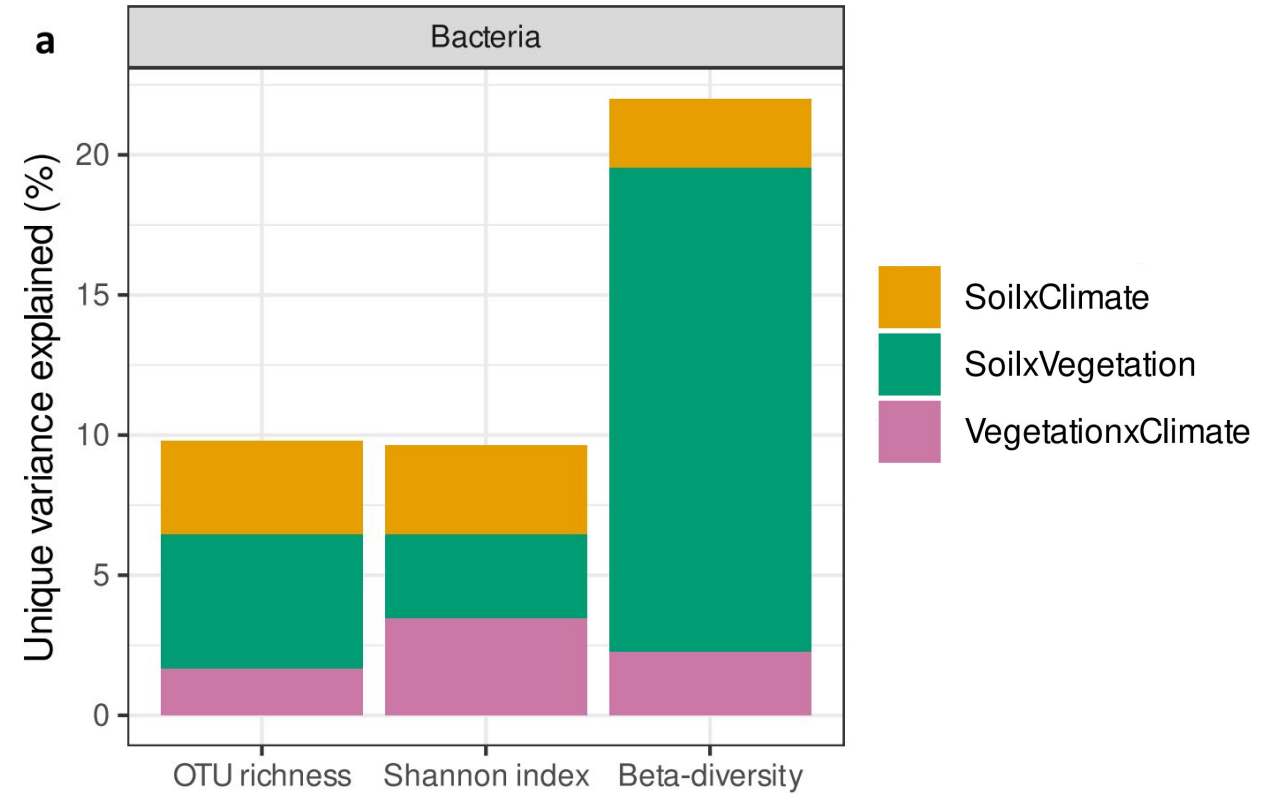

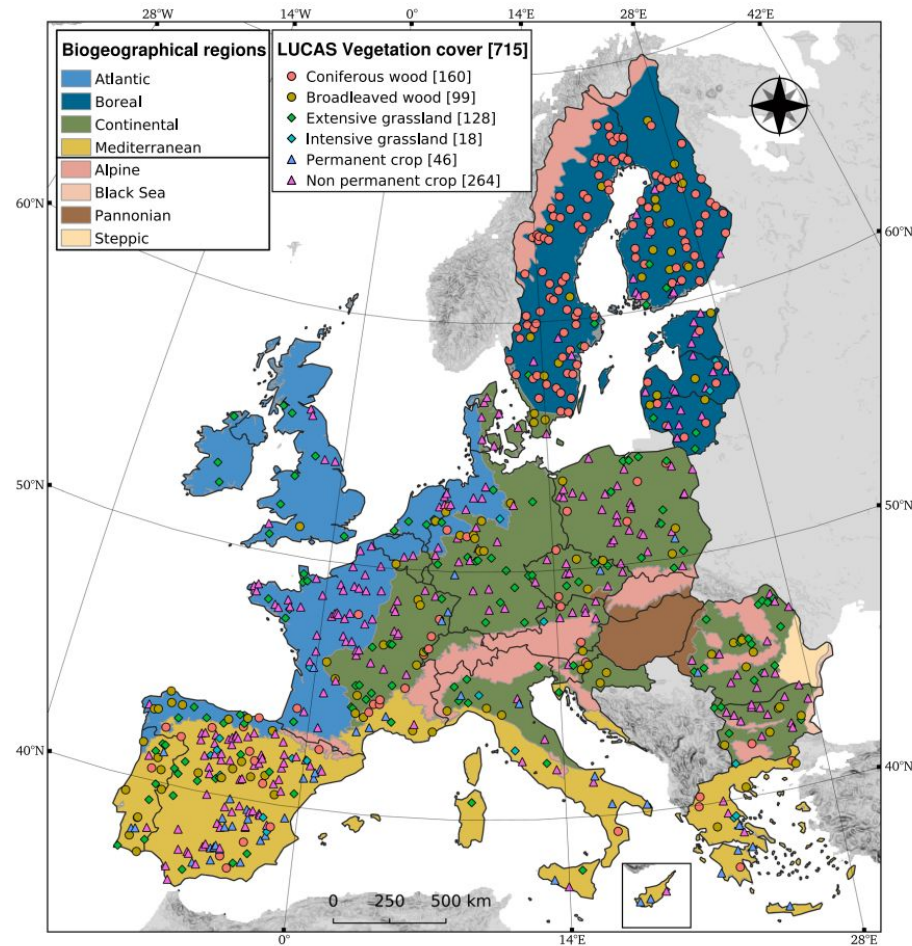

Global analysis of soil bacterial genera and diversity in response to pH

Soil Biology and Biochemistry 2024

Soil biodiversity: predictions

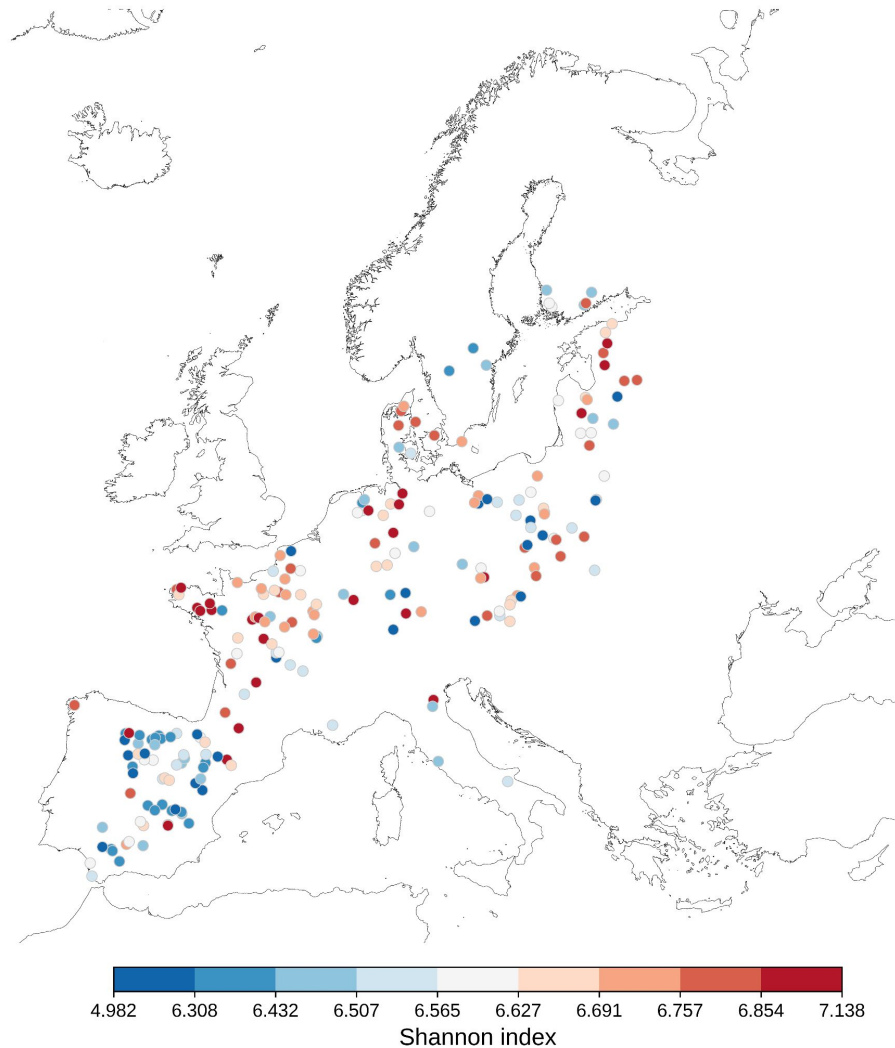

Eurostat's 2018 pan-European LUCAS Soil module

Patterns in soil microbial diversity across Europe

Nature Communications 2024

Soil biodiversity: predictions using satellites

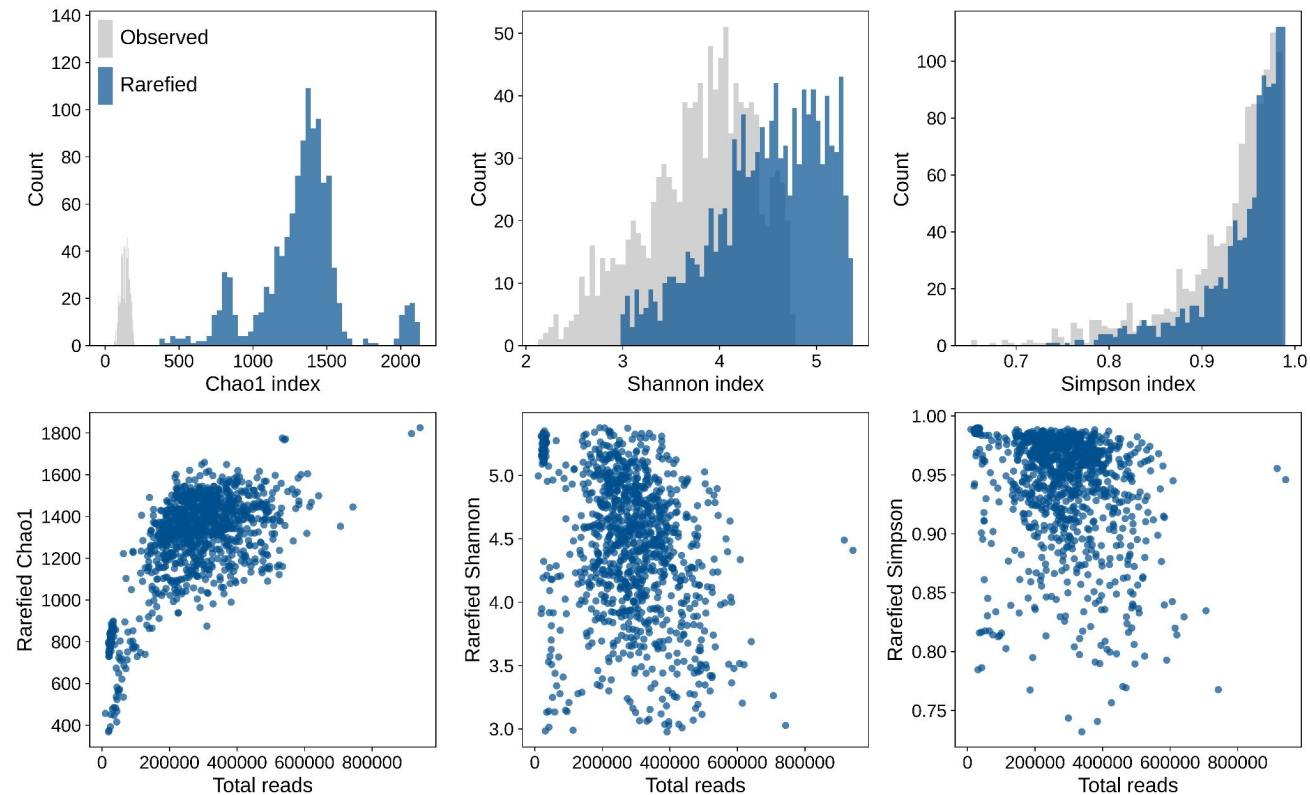

- **214** cropland soil samples collected in the context of Eurostat's 2018 pan-European LUCAS Soil module
- **12** spectral indices from Sentinel-2 images (point estimates)
- Predicted alpha diversity (Shannon) $R^2 \approx 0.11$

Predicting Bacterial Diversity in European croplands Using Earth Observation and Meteorological Data

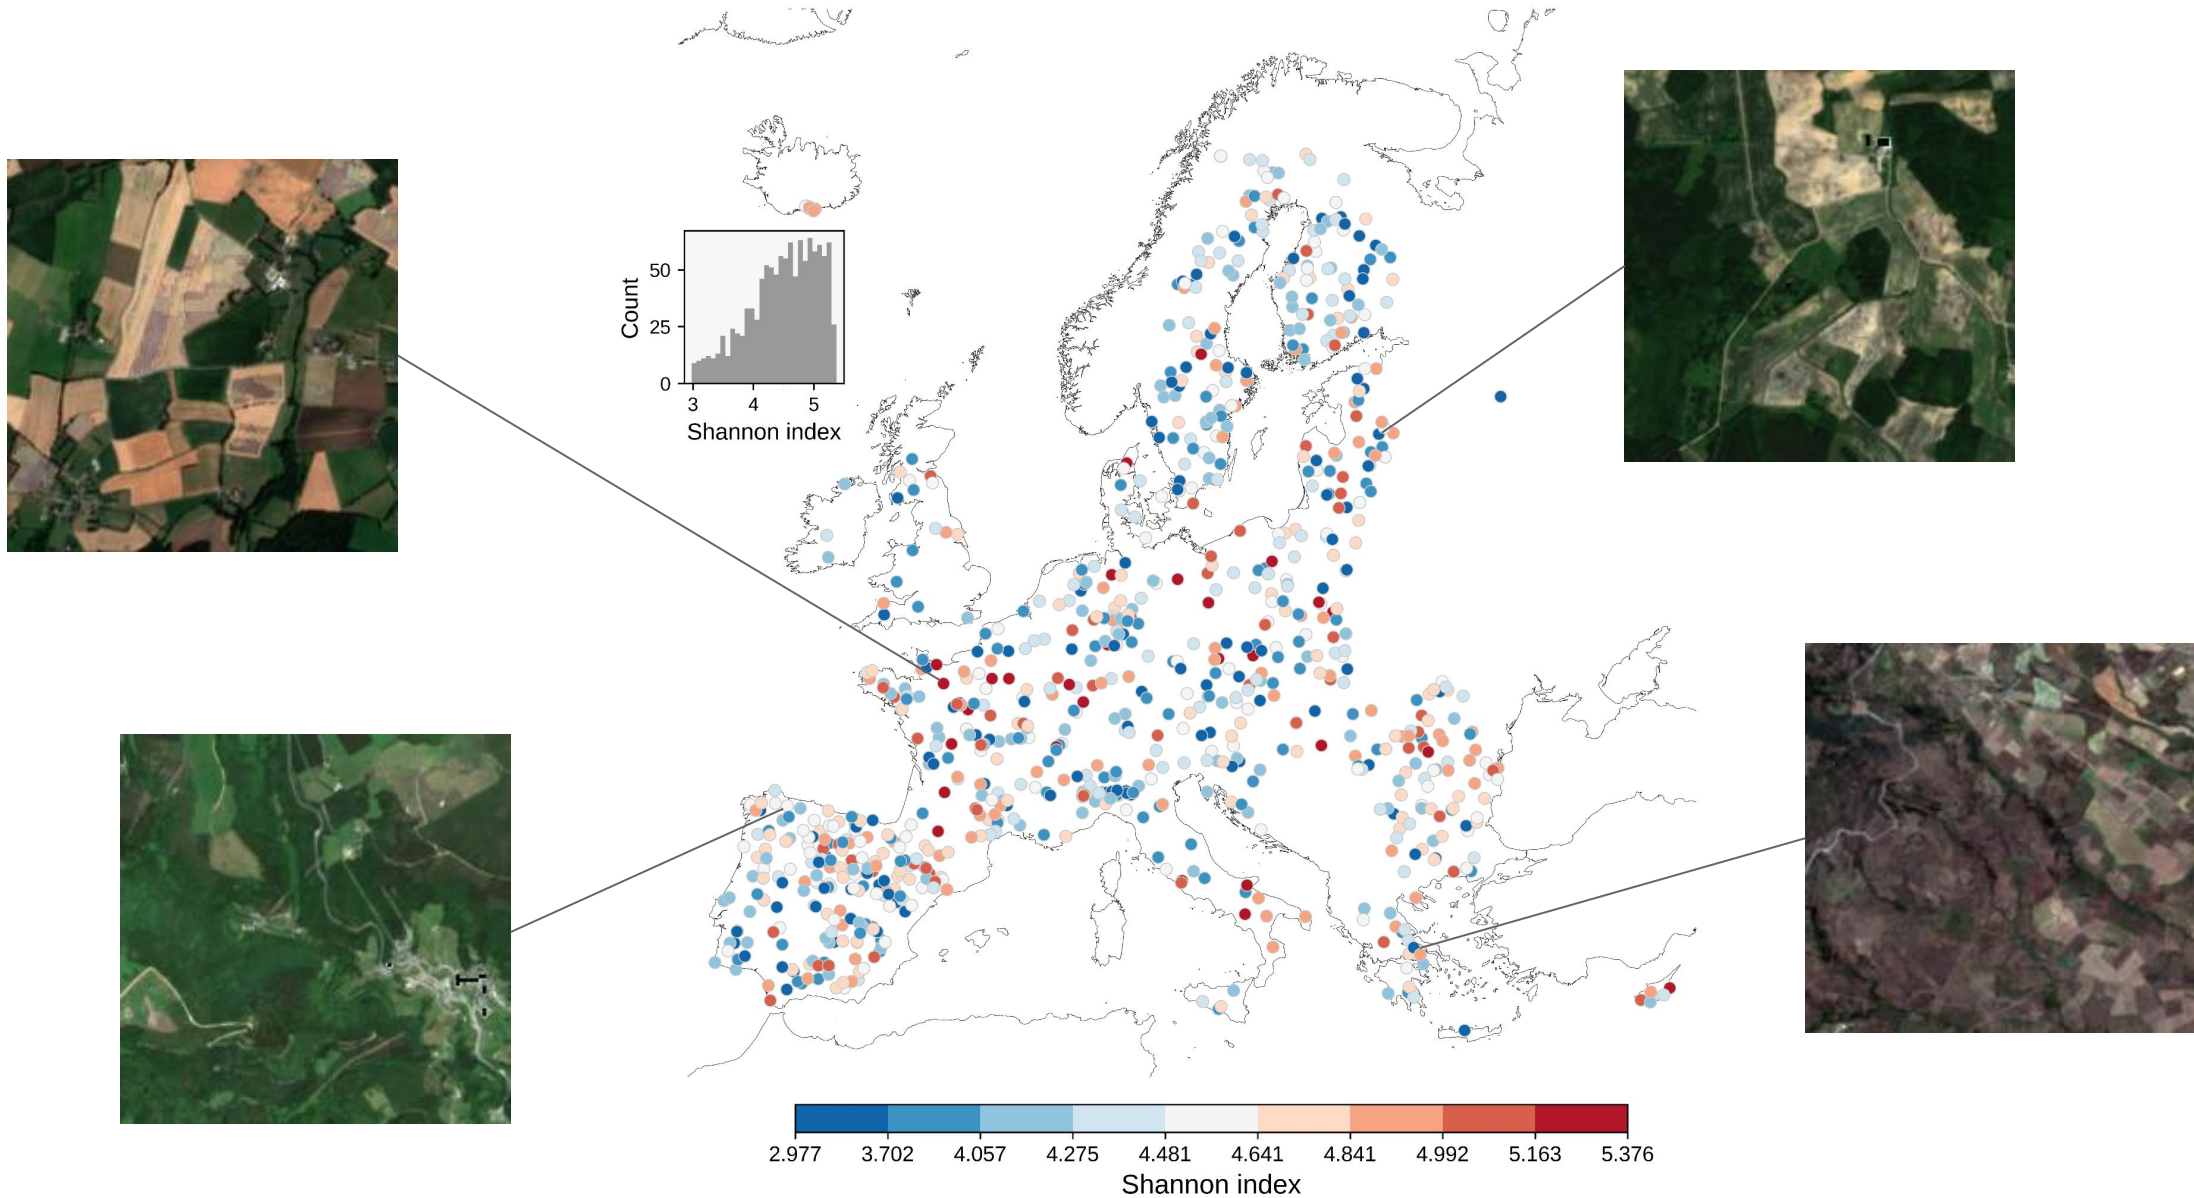

Dimitrios Bormpoudakis, Pablo Sánchez-Cueto, Soraya González Sánchez, Spyros Theodoridis, Maëva Labouyrie, Alberto Orgiazzi, Panos Panagos, Arwyn Jones, Salvador Lladó, Martin Hartmann, Charalampos Kontoes

Soil biodiversity: diversity observations

- Soil (max 50 cm depth) DNA sequences for ~**1'100** localities downloaded and reanalysed with custom bioinformatic pipelines and rarefied at 10'000 DNA reads
- The majority of observations (~750) were produced within Eurostat's 2018 pan-European LUCAS Soil module

Soil biodiversity: satellite observations

Soil biodiversity: Sentinel 2 spectral bands as images

Red (B4): 0.655 μm
Green (B3): 0.560 μm
Blue (B2): 0.490 μm

Vegetation Red Edge (B6): 0.740 μm
Green (B3): 0.560 μm
Blue (B2): 0.490 μm

Vegetation Red Edge (B6): 0.740 μm
Vegetation Red Edge (B7): 0.783 μm
Near infrared (B8): 0.842 μm

Soil biodiversity: predictions using computer vision

B2, B3, B6

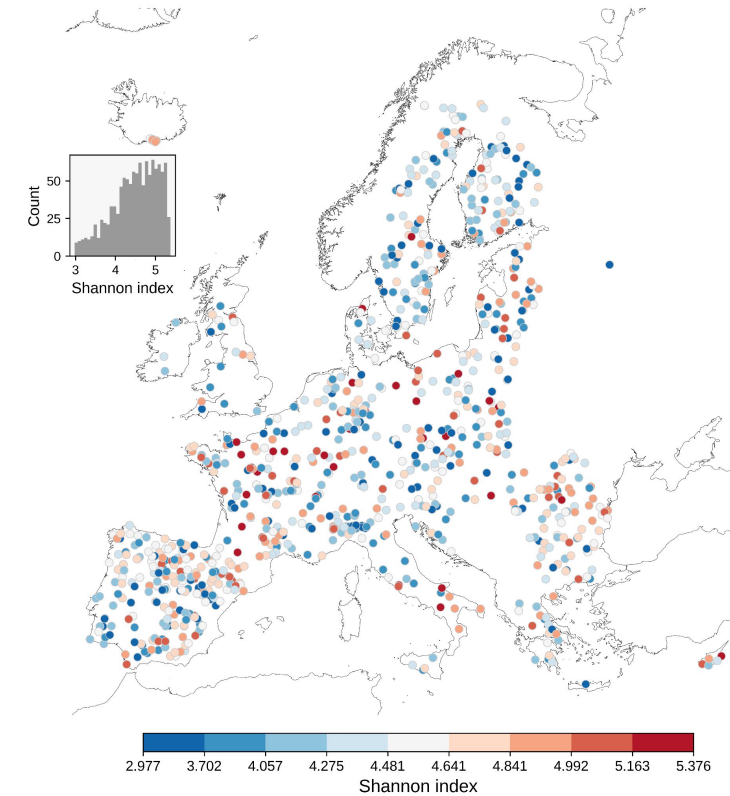

B3, B4, B12

B6, B7, B8

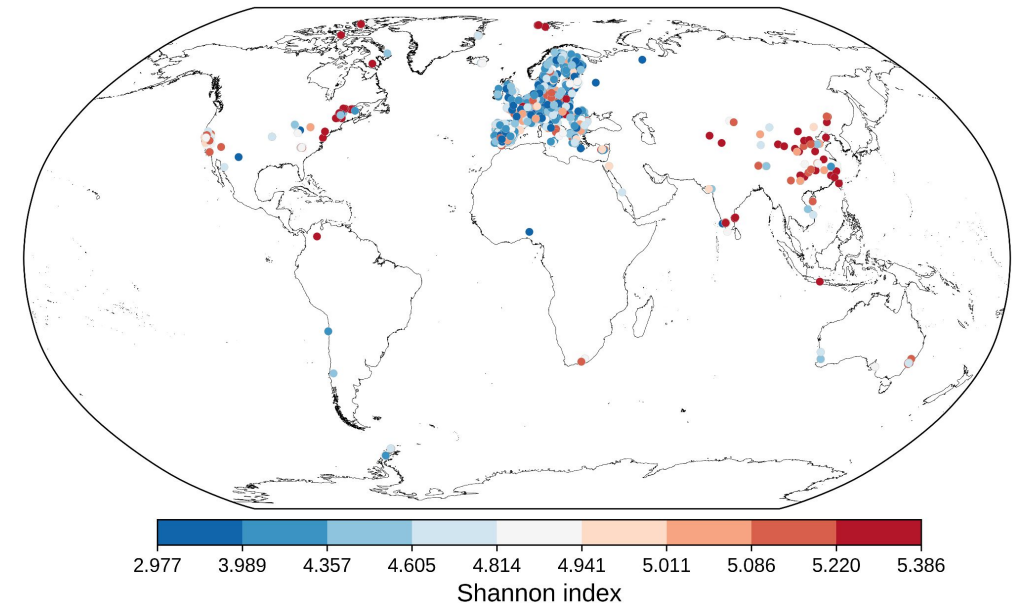

Residual Networks Convolutional Neural Networks

Soil biodiversity: ongoing work

- Multi-band (more than three simultaneously) inference using pretrained foundation models
- Cloud filling / correction of Sentinel 2 images
- Inclusion of spectral indices as bands (e.g. NDVI, NDCI, SMI)
- Expand at global scale (~2'000 localities)
- Predictions for bacterial human pathogens

Thank you!
