

# Application of Artificial Intelligence in the study of Ecosystems

**Rohaifa Khaldi**, Yassir Benhammou, José Rodríguez, Sergio Puertas-Ruiz, Jacobo Casado, Javier Martínez-López, Domingo Alcaraz-Segura, and Siham Tabik.

# Outline

Project 1: Land use/cover mapping.

Project 2: High mountain shrubs detection.

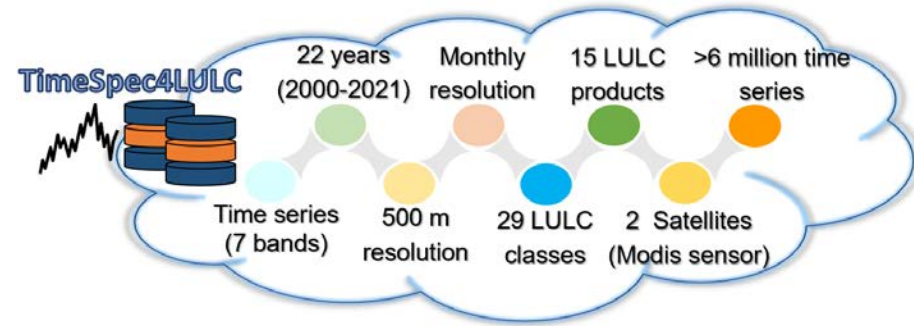

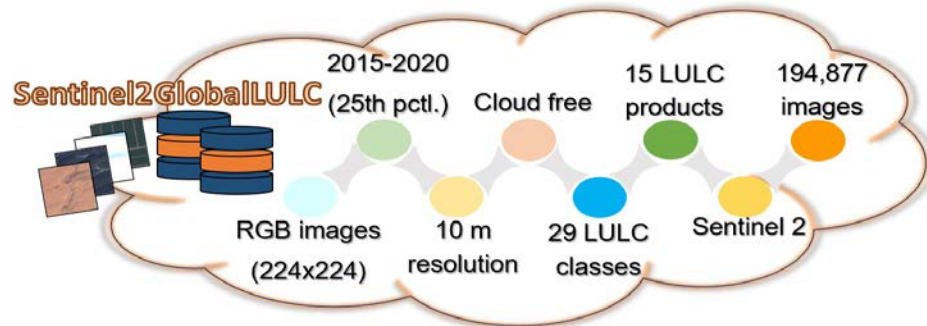

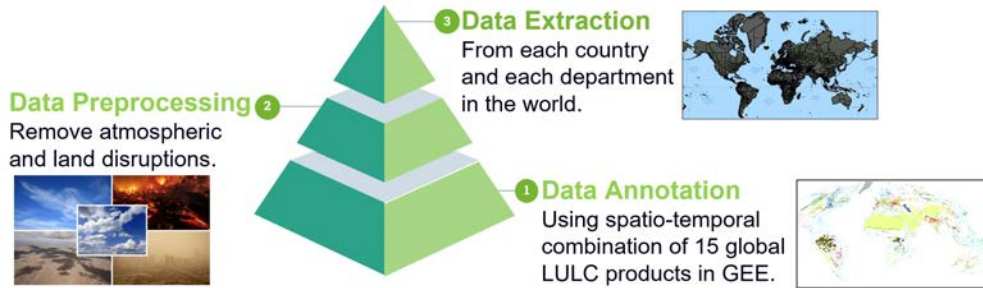

Project 3: Diatoms recognition.

Other ongoing projects.

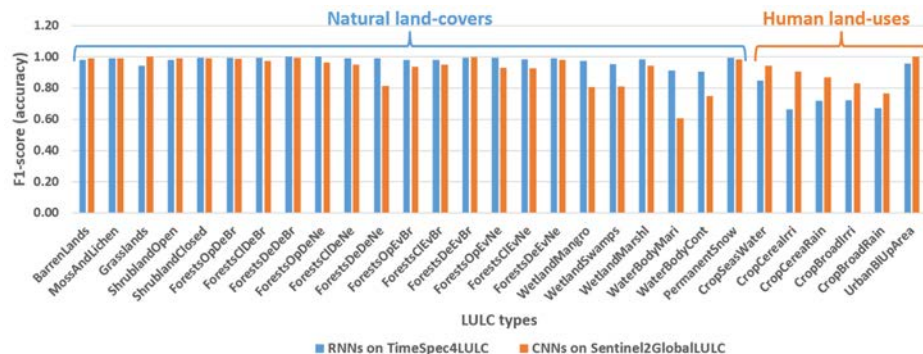

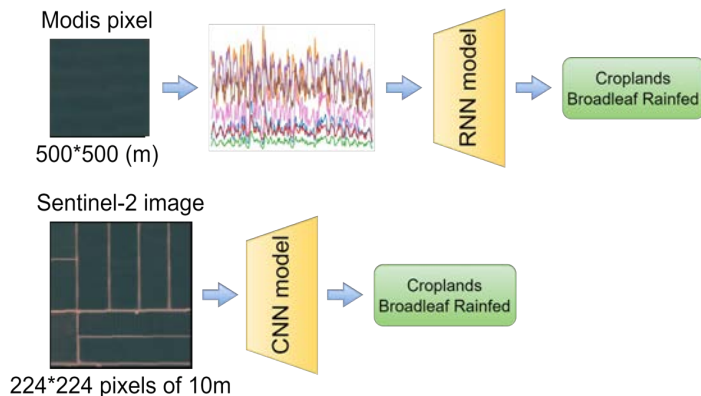

# Land use/cover mapping

# Land use/cover mapping

**Natural land-covers** were better classified by **RNNs** trained on TimeSpec4LULC multispectral MODIS time-series while **human land-uses** were better classified by **CNNs** trained on Sentinel2GlobalLULC VHR RGB snippets.

# High mountain shrubs detection

- Dataset of **900** digitized *Juniperus shrubs* from **six zones** along **5 decades** from 1977 to 2020 using orthophotography and Google Satellite images with metadata about: Morphotype and surrounding types, health status, and certainty.

- Dataset of **2000** annotated VHR satellite RGB images from Google Earth to recognize *Juniperus* shrubs.

- Dataset of **810** annotated VHR satellite RGB images from Google Earth to detect and segment *Juniperus* shrubs.

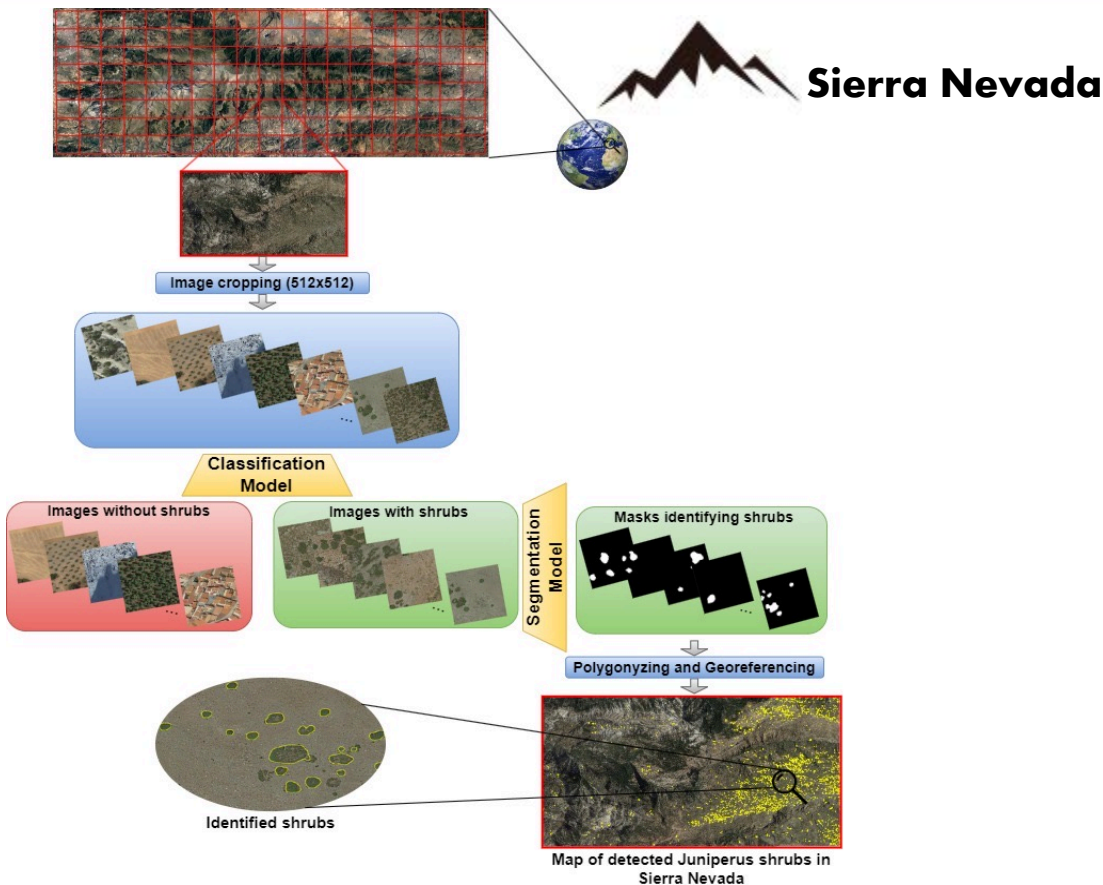

# High mountain shrubs detection

The combination of **classification** and **instance segmentation** models allowed to automatically map shrubs on remote sensing imagery.

# Diatoms recognition

## Creation of **DiatomNet** database:

- 22 diatom classes.
- 10650 images.
- Images with different qualities, resolutions, zooms, and light intensity.

User-friendly interface for diatom recognition.

### Clasificador de diatomeas automático

Predicir Nuevo

La clase predicha por el modelo es **Amphora**

Predicciones:

Amphora - probabilidad: 100.0 %.

Encyonema - probabilidad: 0.0 %.

Gomphonema - probabilidad: 0.0 %.

Luticola - probabilidad: 0.0 %.

Psammothidium - probabilidad: 0.0 %.

# Other ongoing projects

Estimation of photosynthetic pigments concentration in high mountain lagoons.

Identification of herbarium species from images.

 IBERGRID

11<sup>th</sup> Iberian Grid Conference  
Faro, 10<sup>th</sup> – 13<sup>th</sup> October 2022

# Thanks for your attention!

This research is part of the project “Thematic Center on Mountain Ecosystem & Remote sensing, Deep learning-AI e-Services University of Granada-Sierra Nevada” (LifeWatch-2019-10-UGR-01), which has been co-funded by the Ministry of Science and Innovation through the FEDER funds from the Spanish Pluriregional Operational Program 2014-2020 (POPE), LifeWatch-ERIC action line.
