Monitoring system of protected areas

- Real time
- **Comparable** between locations
- **Management-relevant**
- **Understandable** by the citizens
- Based on **essential biodiversity variables**

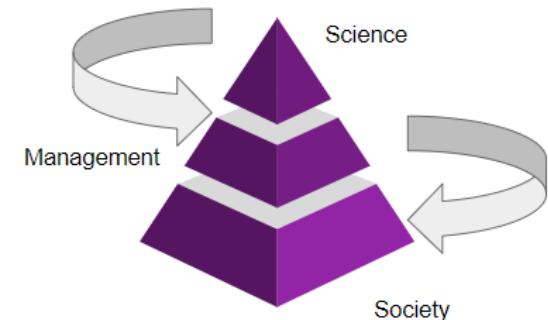

2015 | VOL 523 | NATURE | 403

Agree on biodiversity
metrics to
track from space

Ecologists and space agencies must forge a global monitoring strategy, say **Andrew K. Skidmore**, **Nathalie Pettorelli** and colleagues.

Remote sensing monitoring of protected areas

- **Multi-temporal scale**
- Identification of **spatial and temporal patterns** in ecosystem functioning
- **Multiple** spatial and temporal **resolutions** (from meters to kilometers)
- **Standardized protocols** for different environments
- **Lower cost and effort** than field campaigns
- **Users cascade**

Essential Biodiversity Variables (EBVs)

- **Minimum set of essential measures** that capture the main dimensions of biodiversity: composition, structure and function (Noss 1990).
- Informs on the **status of biodiversity**
- **Sensitive to changes** in biodiversity
- **Effective, ecosystem-independent and global**

Ecosystem dimensions

UNIVERSIDAD DE GRANADA

SMART ECOMOUNTAINS

Introduction

Satellite-derived metrics that can be used as a set of highly informative core variables characterizing different dimensions of ecosystem functioning

Nutrient cycling

- Aerosols

Organic carbon

- Vegetation indices NDVI-EVI
- Chlorophyll in water bodies Chlorophyll-a
- Available metabolic energy
- Passera model

Ecosystem services

Energy balance

- Surface temperature
- Albedo
- Evapotranspiration

Water balance

- Evapotranspiration
- Latent heat
- Snow cover dynamics: NDSI, % snow days...
- Water content in vegetation-soil: NDWI, LSWI

REMOTE Nevadensis will alert us to changes in essential biodiversity variables related to ecosystem functioning, such as primary production, soil moisture content or snow cover, among others.

Specific objectives

Development of a Virtual Research Environment (VRE) with three types of end-users:

- **Researchers and managers programmers**

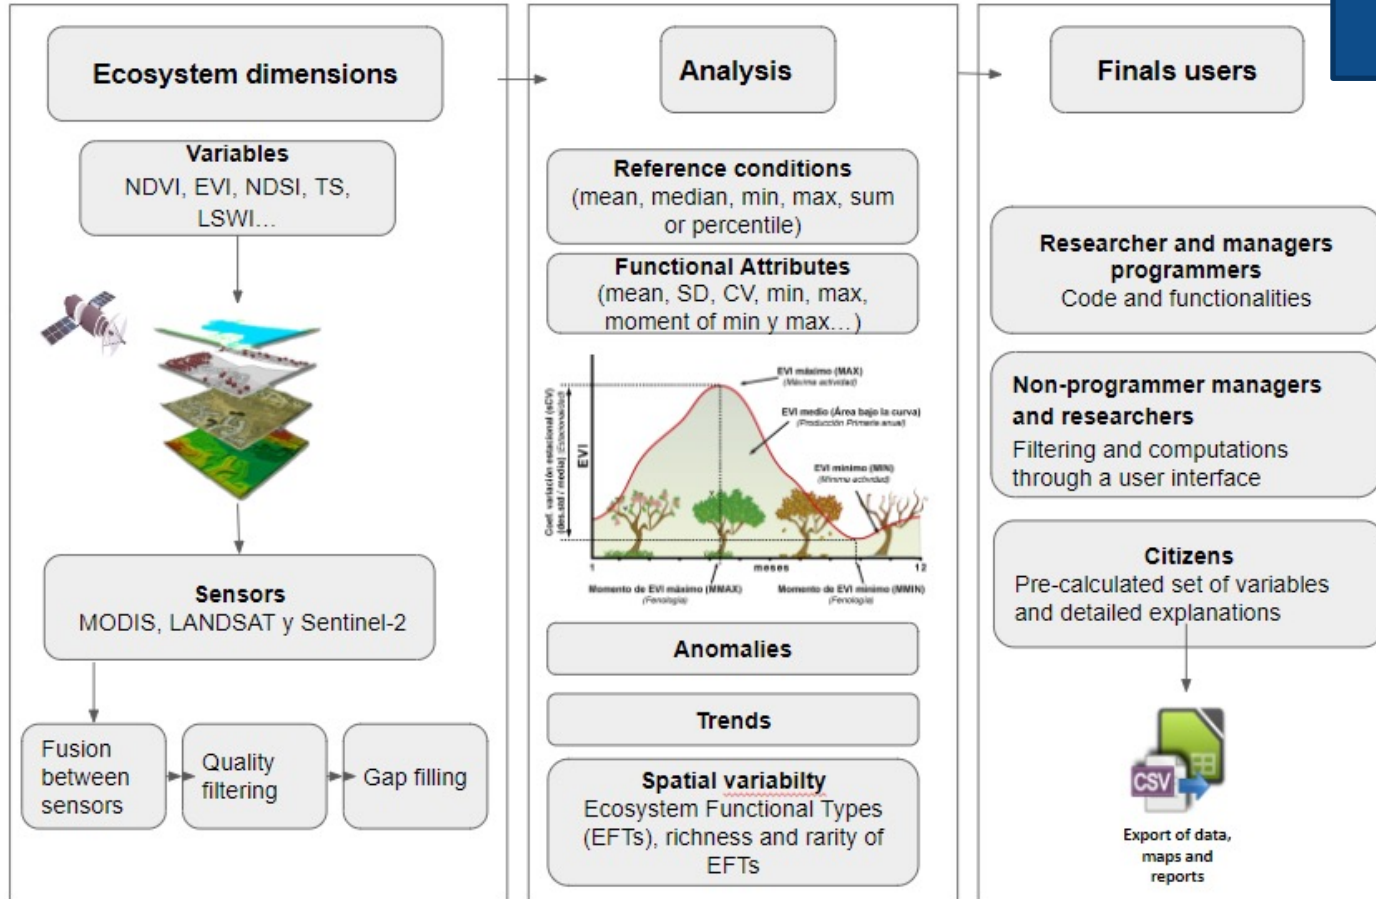

Code and functionalities (import via GEE or use of specific code editor)

- **Non-programmer managers and researchers**

Selection of variables and calculations via user interface

- **Citizens**

Pre-calculated set of variables and storytelling

Methods

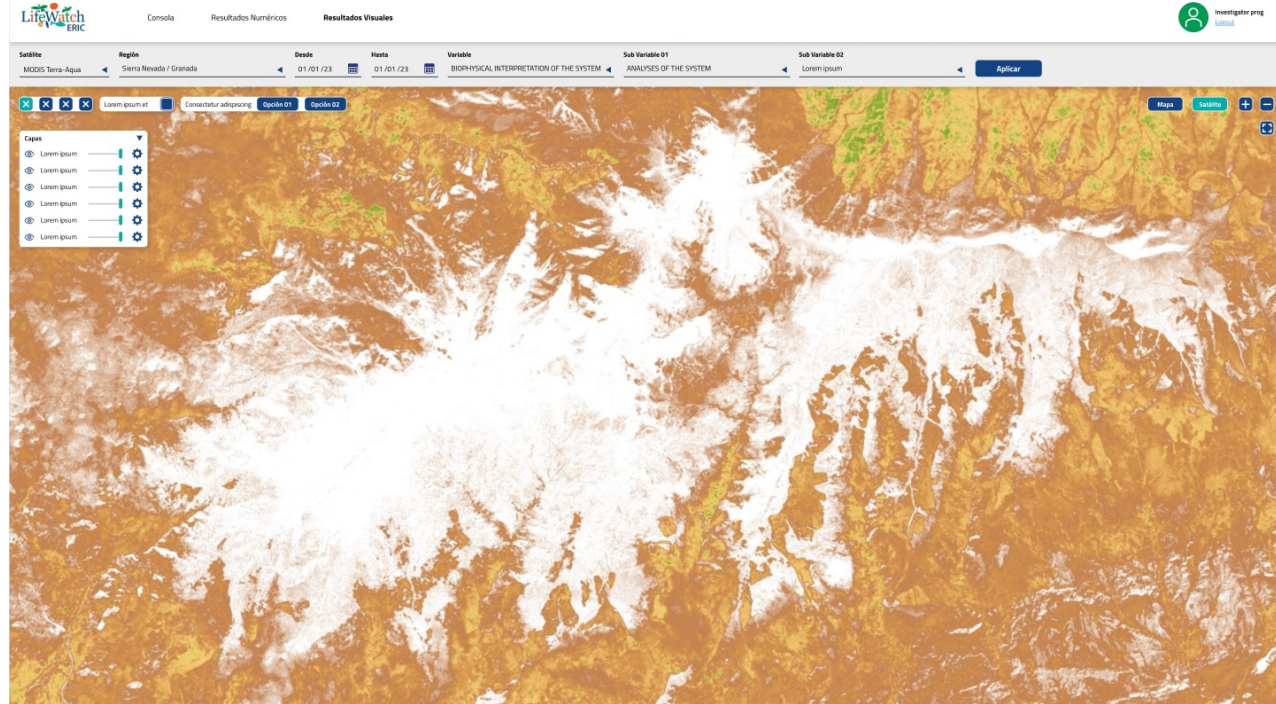

Virtual Research Environment (VRE)

Results

A. Researcher/manager programmer

Display with selection of:

- Variables
- Sensor
- Dates
- Analysis to be carried out and
- Downloading

Virtual Research Environment (VRE)

A. Researcher/manager programmer

- Code editor
- Can load libraries, functions and assets

```
evi-modis.js Get Link Save Run Reset Apps Settings  
1 |var remote = require('users/mantequera/remote:/remote.js');  
2  
3 remote.date.year.setFrom(2000).setTo(2020);  
4 remote.date.month.setFrom(1).setTo(12);  
5  
6 remote.region.useProtectedArea('ESP', 'Sierra Nevada');  
7  
8 remote.source.reset();  
9  
10 /*  
11 remote.source.setVariable('EVI');  
12 remote.source.setSensor('Modis');  
13 remote.source.setAggregation('mean');  
14 remote.source.setCollection('MODIS/061/MOD13Q1');  
15 remote.source.setBands(['EVI']).setCalc('b("EVI")*0.0001');  
16 */  
17  
18 remote.source.setEcosystem('CPP').setVariable('EVI').setSensor('MODIS').setAggregation('mean');  
19  
20 var temporalDynamics = remote.workflow.getTemporalDynamics();  
21  
22 var efa = remote.workflow.getEfa('Mean', temporalDynamics);  
23  
24 remote.map.addLayers(efa, {min: 0, max: 1, palette: ['eadd4', '0b1e05']});  
25  
26 remote.report.addSerie(efa, 250);  
27  
28 remote.report.showChart();
```

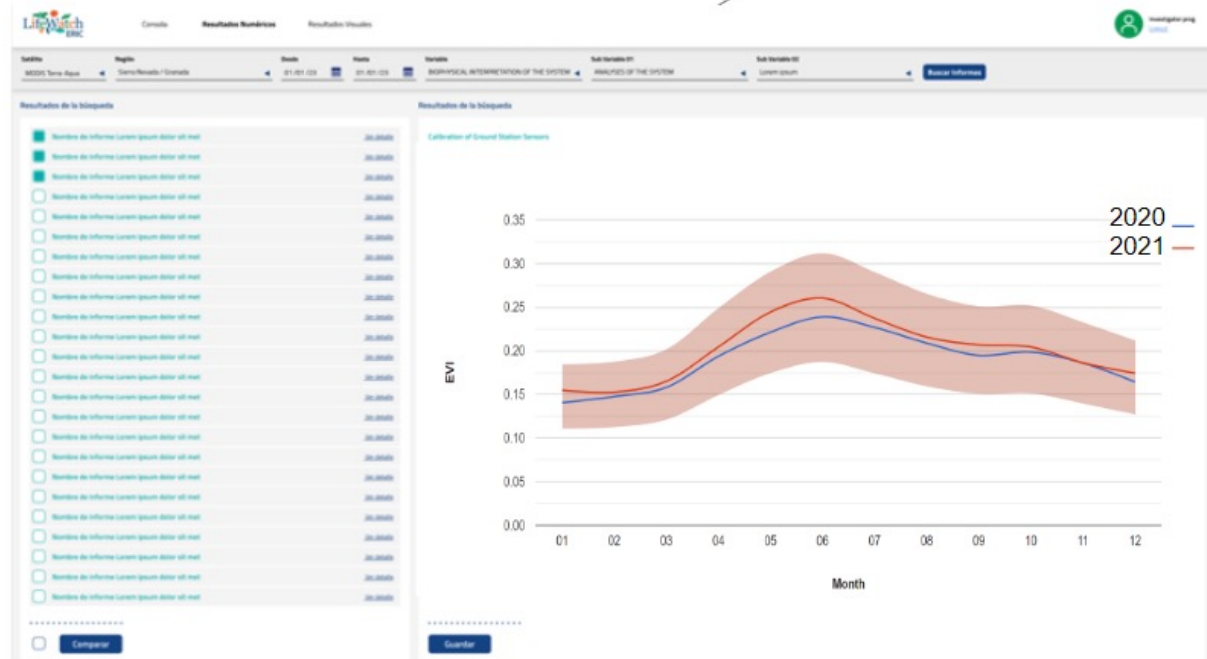

Virtual Research Environment (VRE)

Results

A. Researcher/manager programmer

Graphs for reports with option to select:

- Variables
- Sensor
- Dates,
- Analysis to be performed and
- Downloaded

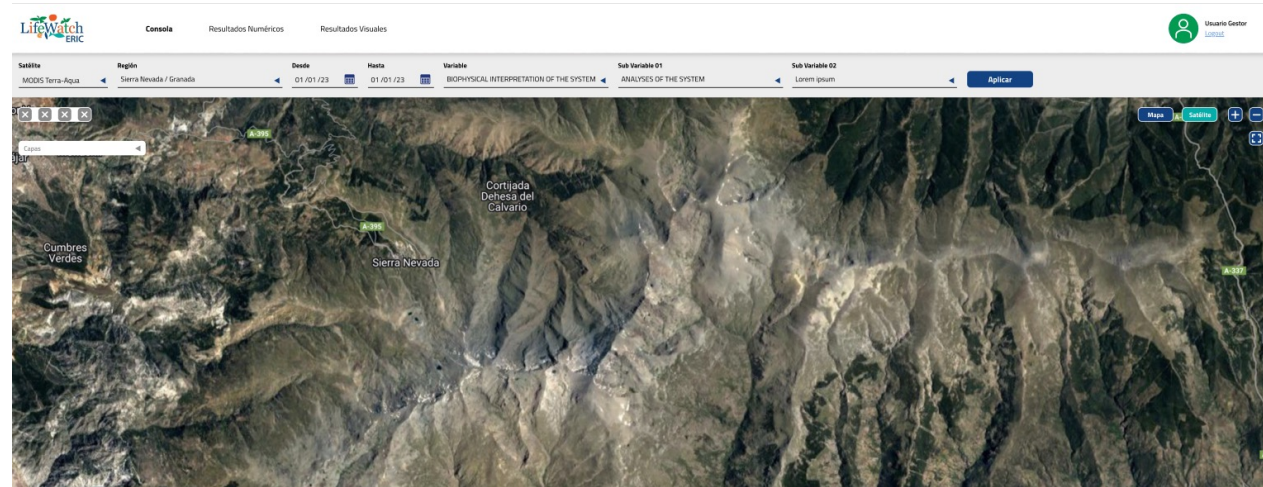

Virtual Research Environment (VRE)

Results

B. Manager / Researcher
NON-programmer

Display with selection of:

- Variables
- Sensor
- Dates
- Analysis to be carried out and
- Downloading

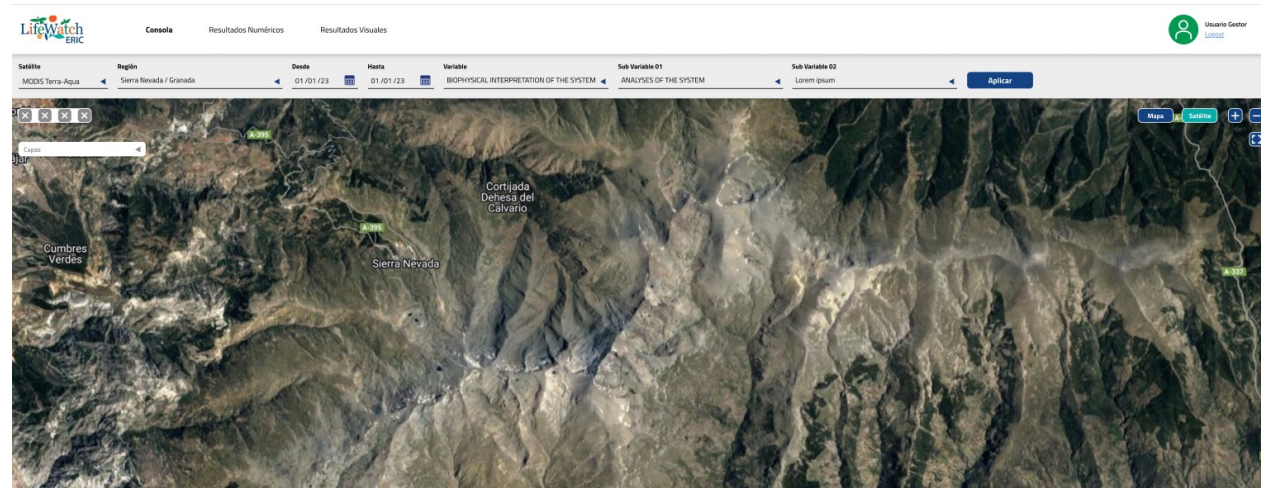

No code console for programming !!

Virtual Research Environment (VRE)

Results

C. Citizen (Outreach)

Analysis to be carried out with **default** dates, without choice

No code console for programming !!

Virtual Research Environment (VRE)

Vegetation Index monitoring

Virtual Research Environment (VRE)

Results

A. Researcher / manager programmer

Vegetation Index monitoring

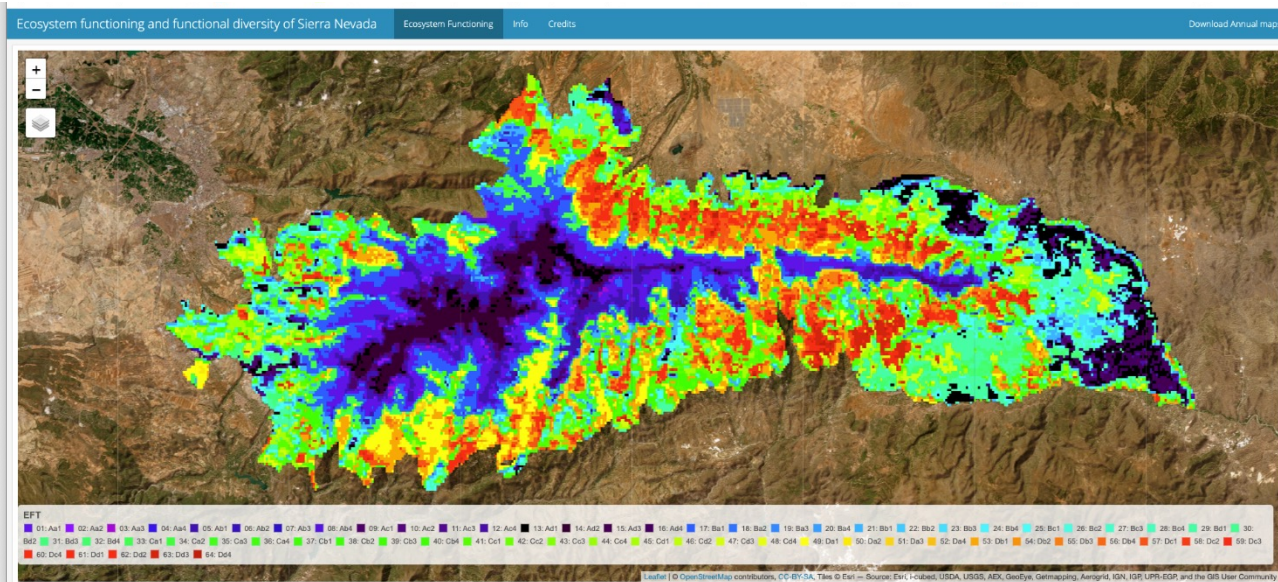

Valor mensual interanual(1985-2023)
de NDVI por tipo de ecosistema

Virtual Research Environment (VRE)

Results

- **Diversity of Ecosystem Functional Types** (primary production, phenology, seasonality)
- **Rarity, richness, dissimilarity of EFTs**, etc. (Online Demo)

Cazorla et al. 2023

Virtual Research Environment (VRE)

Results

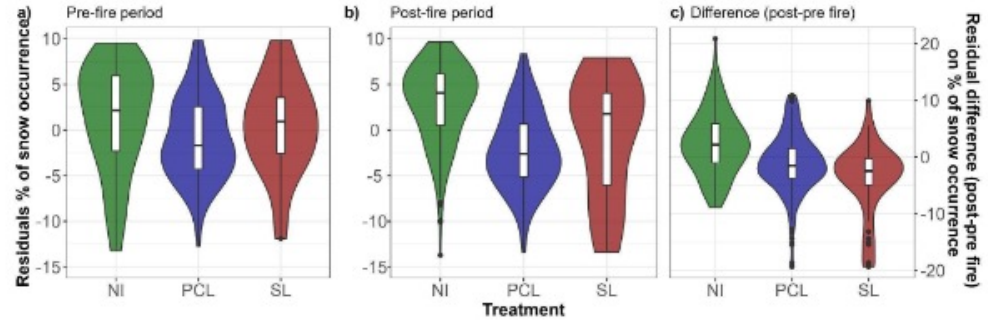

Snow cover monitoring

Virtual Research Environment (VRE)

Results

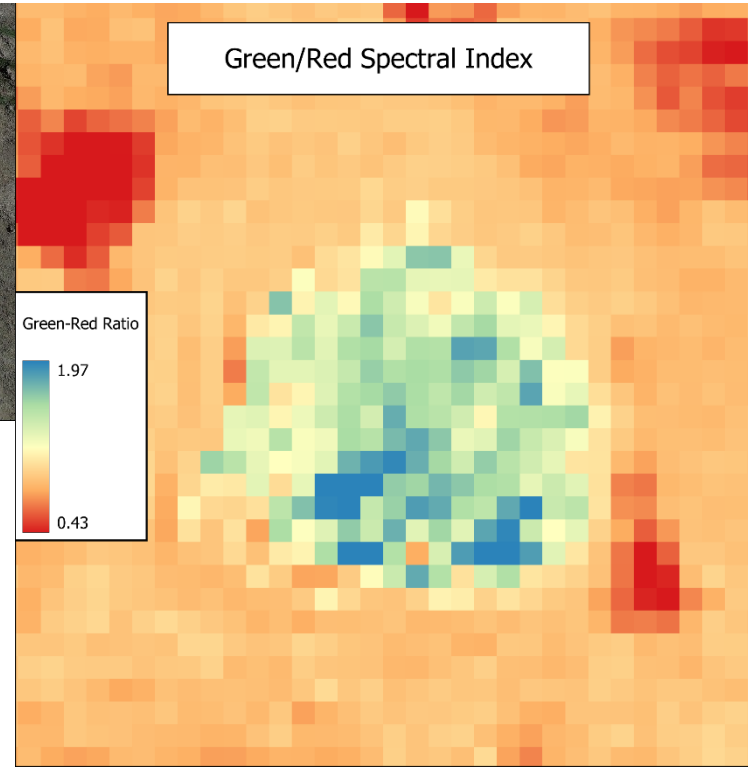

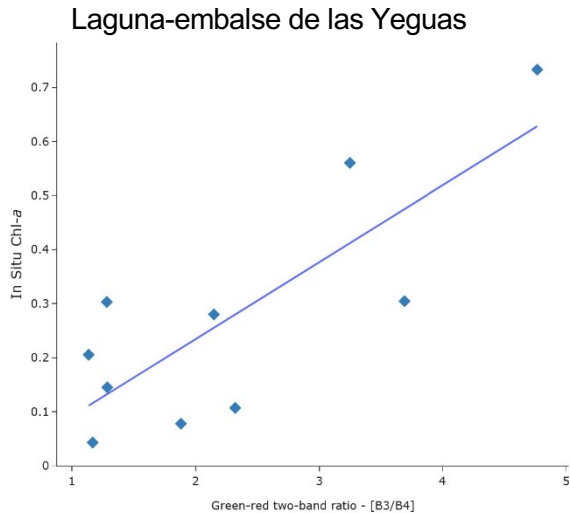

Monitoring of post-fire snow cover (forest management)

Virtual Research Environment (VRE)

Results

Chlorophyll-a monitoring in high mountain lakes (Sentinel-2)

Virtual Research Environment (VRE)

Results

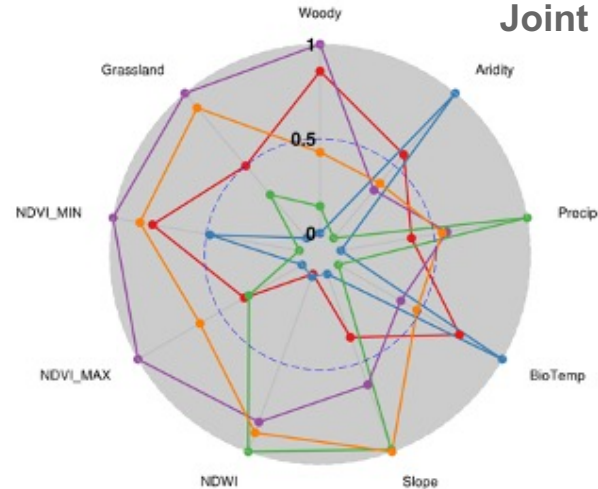

Atmospheric coarse particles (Saharan dust): Merra-2

Virtual Research Environment (VRE)

- **Diversity of Functional Habitat Types**
- **Climatic, structural and functional variables** (mean precip. and temp., seasonality, herbaceous/woody cover, slope, soil moisture/vegetation).
- **Potentially similar areas within the ecoregion**
- **Connectivity between AAPPs**

Digital Observatory for Protected Areas (DOPA)
Joint Research Centre

Conclusions

- A **monitoring system** for key biodiversity **variables** related to **ecosystem structure, functioning and services**: e.g. carbon cycling, water, nutrients, etc.
- **Reference conditions, trends, rapid changes and anomalies** in a fast, reliable way and in all areas
- **LifeWatch Virtual Research Environment (VRE)** has **three types of users**: programmer **researcher**, **manager** and non-programmer researcher, and **citizen**. Overcoming the barrier of non-programmer researcher/manager access to satellite information
- Monitoring systems have proven to be **useful and necessary** for researchers, managers and the society (Global Forest Watch, Global Surface Water Bodies, Digital Observatory for Protected Areas, ...)
